\* Jasper Sand Dunes purchased prior to December 2015 only. For material purchased December 2015 and newer Sand Dunes see maintenance instructions at <http://www.danskhardwood.com/installation-and-care/maintenance-care/>

The following instructions are for Dansk floors with Natural Oil or Oil/Wax finishes only. For instructions on UV Cured Urethane finishes, please visit [www.danskhardwood.com](http://www.danskhardwood.com) or contact your Dansk dealer.

Cleaning products recommended for Dansk Oiled Finished colours replenish the oil finish and rejuvenate the floor as part of the regular floor cleaning. With proper maintenance, an oiled floor will last a lifetime and always maintain its genuine natural beauty without the need for sanding. Depending on the environmental conditions and amount of traffic, annual application of WOCA Oil Refresher is recommended to moisturize and condition the Oil finished colours. In dryer climates and on areas that receive a higher amount of traffic, more frequent application may be necessary to properly maintain your floor.

### CARE & MAINTENANCE AFTER INSTALLATION: Natural Oil and Oil/Wax Finished Floors

**IMPORTANT:** It is highly recommended immediately after installation your Dansk Natural Oil and Oil/Wax finished floor should be cleaned with the products above and then a treatment of oil refreshing with the product listed in the chart above under "Oil Refreshing". This ensures complete coverage of the entire floor surface and adds an additional layer of protection to the oil that was applied in the factory. Please follow the dilution and procedures for cleaning and refreshing on the products containers.

**DAILY CLEANING** For regular daily upkeep of your floor, a simple sweeping or vacuuming should be all that is required. Use a vacuum with a felt or brush head (without a beater bar) dust mop or sweep once a week or more if needed.

### CLEANING & RE-OILING

Natural Oil and Oil/Wax finished floors require occasional cleaning and oil refreshing. How frequently these need to be done depends entirely on how much use the floor gets. For occasional light cleaning, or when the floor appears dull or dirty, clean the floor with the approved product listed above only. Products containing alcohol are not approved for use when cleaning Dansk floors with oil finishes. Periodically, the floor will need to be treated again with Wood Cleaner and Oil Refresher. This only needs to be done to areas of the floor that are exposed to wear and tear, and only when those areas appear worn or dried out. In a typical residence, the floor may need cleaning and refreshing once every one to three years, depending on use. To refresh the floor follow the procedures on the products containers. High traffic areas tend to wear more than low traffic areas. Refreshing oil products may be applied to the high traffic areas only without having to re-coat the entire floor.

Your hardwood floor by Dansk is made to last a lifetime. Through proper maintenance and care you can ensure its continued beauty and appearance.
